

You can get a lot done with two
primitives: RPC and Topics

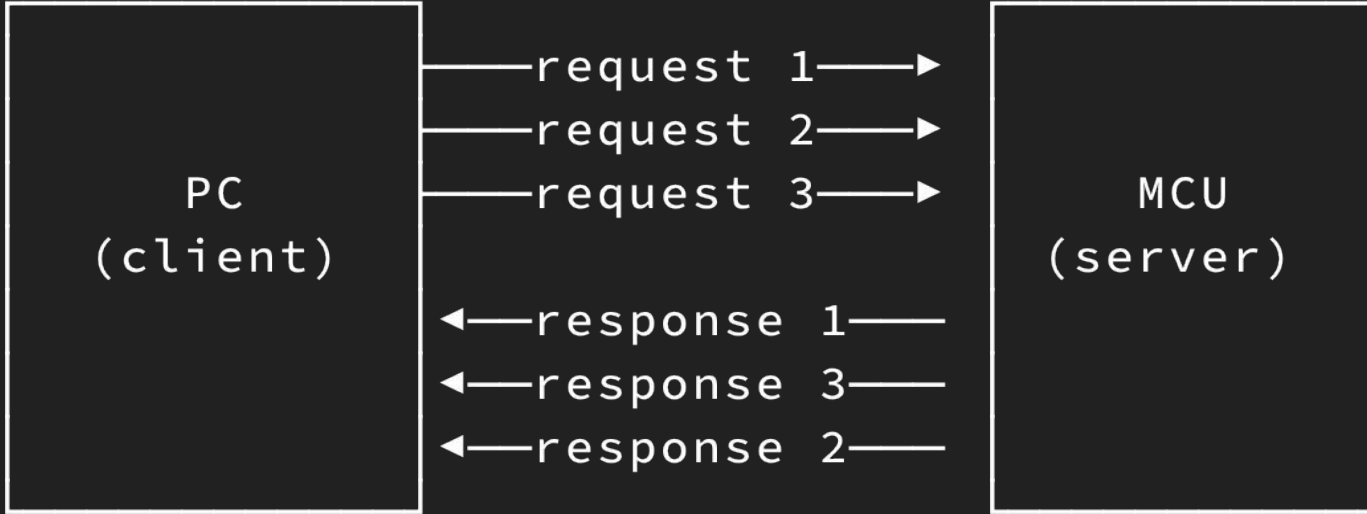

1

rpc: "remote procedure call"

1

1

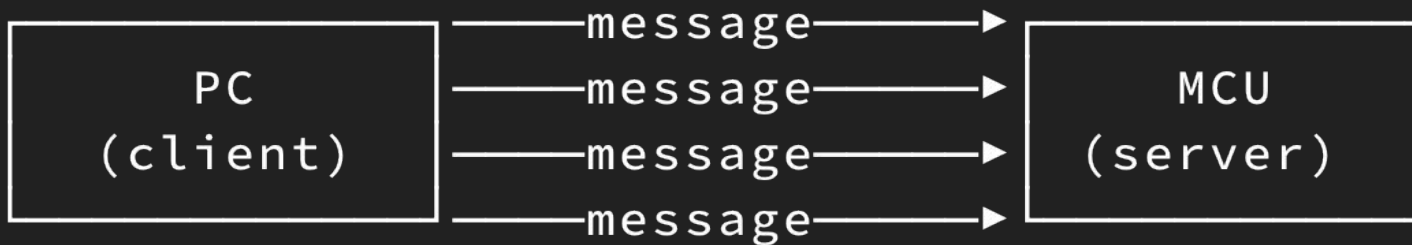

ONE VARIABLE

```
async · fn · procedure(Request) · -> · Response · {  
    · · · · // · · · ·  
}
```

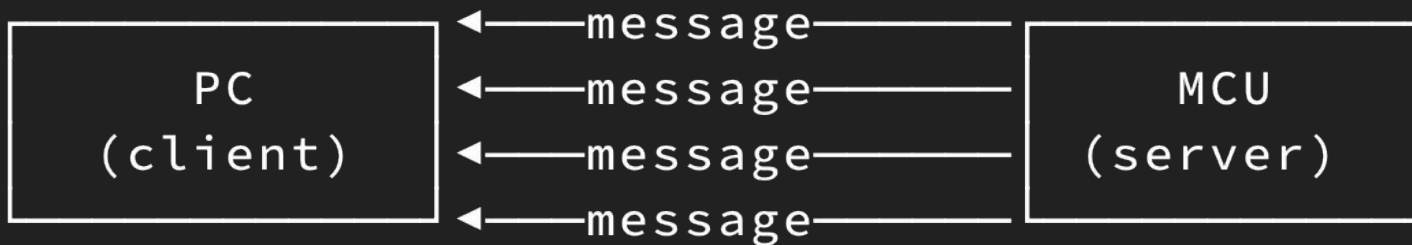

2

"topics", for streaming or notifications

2

and/or

```
// Basically: A channel Sender  
wire.publish::<MyTxTopic>(&data).await?;
```

```
// Basically: A channel Receiver  
let sub = wire.subscribe::<MyRxTopic>().await?;  
let msg1 = sub.recv().await?;  
let msg2 = sub.recv().await?;
```
