1. what do I look at?

innin and a second

will index my website!

Also, even though I have 250K lines of markdown spread across 250 articles my website takes about 1.5 seconds to deploy worldwide and I built my own CDN so I don't have to pay for Cloudfront!

I know this probably raises more questions than it answers, but... well, you know where the comment

answers, but... well, you know where the comment I know this probably raises more questions than it

so I don't have to pay for Cloudfront! seconds to deploy worldwide and I built my own CDN spread across 250 articles, my website takes about 1.5 Also, even though I have 250K lines of markdown

will index my website! Anne annest enerie and maey at mahuid eine anadie

CS-50T/65T/85T

Collapsible Lantern Softbox

Introducing the CS-50T/CS-65T/CS-85T, the ideal soft lighting source for small spaces. With heights ranging from 1.1' to 1.8' when fully expanded, the CS-T series softbox with a shallower depth offer exceptional versatility in compact settings, emitting soft and uniform lighting in all directions. They are perfect for live streaming and video recordings.

4. media management

Blackmagic Cloud

Live Sync Projects

Share your projects with editors, colorists, VFX artists and audio engineers! Everyone can work on the same project, at the same time, anywhere in the world! An editor can even see color grades appear in the timeline as a colorist works in another country! That's true collaboration in real time!

Share Media Globally

Quickly share your media files between each user! You can share media to each DaVinci user, or a central Blackmagic Cloud Store on your network. Local media is fast and sync happens in the background. Smaller proxies will sync first so editors can start working on a project straight away!

Sync Remote Cameras

Use Blackmagic Cloud to sync media from remote Blackmagic cameras directly into a DaVinci Resolve bin. It's all automatic via Blackmagic Cloud. It even syncs media from multiple cameras at the same time! Plus with new live sync, media will sync into DaVinci Resolve bins even as the camera records!
